

HANDSHAKE SOFTWARE

Data Sheet

Relationship Framework

Rapid Deployment for Microsoft Office® 2007 Outlook, SharePoint Server® 2007 and the Web

Benefits

- ⇒ Reduce the time of deployment
- ⇒ Reduce the time to value
- ⇒ Increase the value of portal implementations
- ⇒ Leverage existing LOB Profiles
- ⇒ Consistent approach to integration and Web Part creation
- ⇒ Honor underlying security
- ⇒ Rapidly accommodate change with Dynamic .NET Web Service

Key Capabilities

Rapidly integrate real time information from line-of-business systems without a data warehouse

Relate transactions from Microsoft SQL Server, Informix, DB2, Oracle and Web Services.

Expose all information and relationships as .NET Web Services.

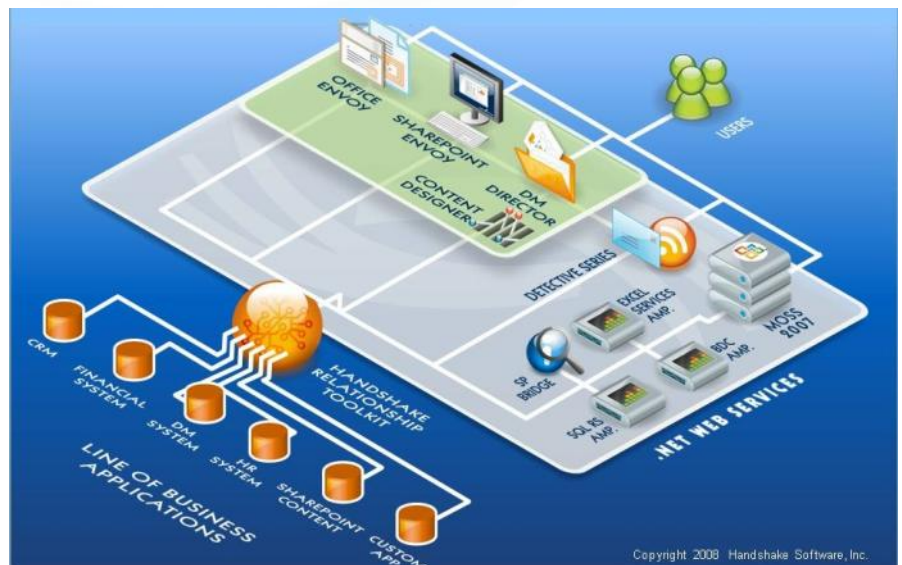

Deliver business transactions from legacy systems into Microsoft Office, Outlook SharePoint, and the Web

Successfully Integrate Line of Business Solutions

The Handshake Software Relationship Framework allows organizations to rapidly integrate their line-of-business (LOB) systems then easily deliver real time information in context through Microsoft Office® Desktop Applications, Outlook, SharePoint® Server 2007 and the Web.

The most time consuming aspects of deploying Microsoft Office 2007 or Microsoft SharePoint Server 2007 is integrating with LOB systems. The Handshake Software Relationship Framework allows rapid integration of LOB systems without data warehousing. We do this through the automatic creation of .NET Web Services that expose all the information and relationships contained in your LOB systems.

The Relationship Framework is the foundation for all of the Handshake Software technology solutions. The integrated .NET Web Service is automatically created based on the profile of the information and data sources defined in the Relationship Framework and the security of the business systems is preserved. Changes to profiled data sources may be modified or extended at any time and the .NET Web Service will automatically accommodate those changes without adding any complexity to the deployment of those changes.

Relationship Framework

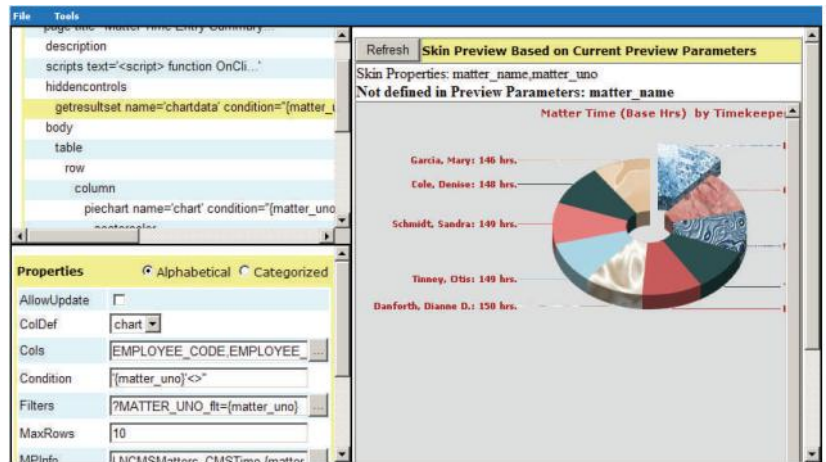

Rapid Deployment for Microsoft Office® 2007 Outlook, SharePoint Server® 2007 and the Web

Solutions Approach

Using Handshake Software tools, someone familiar with the line of business system profiles the information and the relationships. The power of the systems is seen when relationships include data sources between different systems profiled in the Relationship Framework. Once a line of business system is profiled, the information for the system and the relationships are automatically exposed in the Handshake Software integrated .NET Web Service. The integrated Web Service includes methods that make it easy to communicate with both Microsoft Office and Microsoft SharePoint 2007 and deliver information that is in context and relevant to the user.

Content Designer

To maximize precious development resources, other organizational staff, such as someone familiar with the data source, can now be leveraged to provide the domain expertise necessary to achieve benefit from the portal or intranet implementation. Common challenges center around limited time and available development resources. Handshake Software's Relationship Toolkit Suite solves these challenges by providing a Content Designer component as part of the Relationship Toolkit. The Content Designer is a graphical Editor for the XML source required to control the aesthetic involved in rendering content through SharePoint Portal Server. Properties include presentation style, background, font and what data to include can now be easily created or changed without necessitating the involvement of development resources.

Single Effort...Infinite Benefit

Only Handshake Software allows you to leverage all of your application integration in both SharePoint and Office. With Handshake's SharePoint Envoy, you can quickly jumpstart your SharePoint deployment. With Handshake's Office Envoy, all portal information is available in Office task panes. Contact us today to learn how major law firms in 8 countries use Handshake Software to increase the ROI for Microsoft Office SharePoint Server 2007.
