Content Designer

Unique Graphical Interface to Create, Modify and Maintain the look and feel of Web Parts

Overview

The Handshake Software Content Designer, a component of the Handshake Relationship Framework, provides a unique graphical interface in which to create, modify and maintain the look and feel of Web Part skins.

Key Capabilities

Only Handshake Software delivers a complete toolkit that does not require specific development expertise to achieve maximum benefit from a SharePoint implementation.

The Handshake Software Content Designer provides a GUI interface in which to design Web Part skins for portal content, atomically generating the necessary XML to articulate the content formatting.

Extensive Integration

The Handshake Software Relationship Framework provides extensive integration with many enterprise business systems and other legal applications. Custom systems can be easily integrated/ exposed through the Handshake Software Relationship Framework.

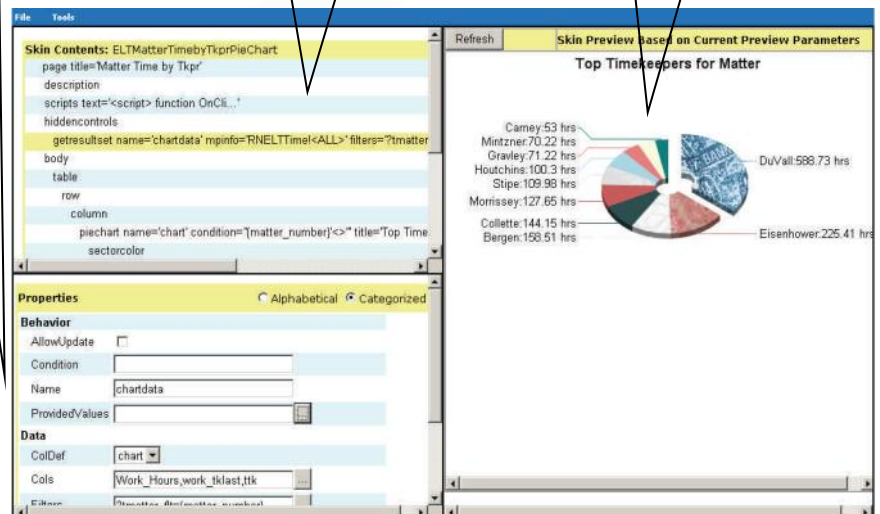

Imagine you are able to see graphic, contextual client data while viewing financial information in SharePoint. Imagine now changing the graph to a list of accounts receivables – without programming and using that same list in your SharePoint deployment! The Handshake Software™ Content Designer provides an easy-to-use graphical interface to create, modify and maintain the look and feel of Web Part skins.

Accommodating the preferences for viewing content within a portal environment is a challenge in any organization. To maximize precious development resources, other organizational staff, such as someone familiar with the data source, can now be leveraged to provide the domain expertise necessary to achieve benefit from the portal or intranet implementation. Common challenges center around limited time and available development resources. The Handshake Software Relationship Framework solves these challenges by providing a Content Designer. The Content Designer is a graphical editor for the XML source required to control the aesthetic involved in rendering content through SharePoint Portal Services. Properties including presentation style, background, font and what data to include now can be easily created or changed without necessitating the involvement of a development resource.

Graphical Interface for editing properties

Dynamic XML—modified properties are translated dynamically to XML script

Real time Preview—readily view the effects of changes to the Web Part skin

Content Designer

Unique Graphical Interface to Create, Modify and Maintain the look and feel of Web Parts

Form Meets Function

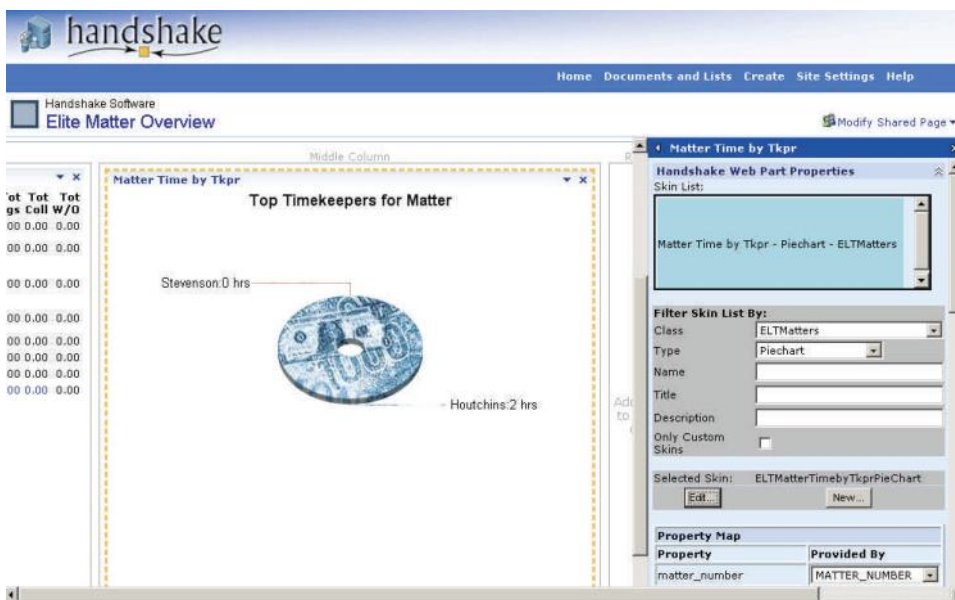

Portal or Intranet implementations often fall short of initial goals. Content within the environment ages without being dynamically updated or, users are required to “dig” more than their busy work days will allow in order to make the transition from older business practices to updated or newer Portal and/or Intranet systems. Handshake Software provides the toolkit that will facilitate increased user acceptance and create the necessary value that will drive users to utilize their Portal resource and deliver content in a visually meaningful and contextual perspective relevant to the user.

Tightly Integrated with SharePoint Portal Services

The Handshake Software Relationship Framework Content Designer provides a graphical interface that mitigates the technical requirements traditionally placed on maintaining Portal and/or Intranet content, and can be launched easily from the SharePoint Page Editor. The Handshake Software approach to visual content design is simple. The Relationship Framework publishes a dynamic Web Part accessible from within the SharePoint Portal. Only Handshake Software allows organizations to use the same integration approach through the dynamic Web Part and presentation method to deliver matter-centric, client-centric,

contact-centric, and person-centric views of information. The Content Designer is the method of customizing the display of the data within the portal.

Additionally the Content Designer provides methods by which values can be provided and/or consumed within the portal, delivering a dynamic and diverse user experience.

Single Effort...Infinite Benefit

Only Handshake Software allows you to leverage all of your application integration in both SharePoint and Office. With Handshake's SharePoint Envoy, you can quickly jumpstart your SharePoint deployment. With Handshake's Office Envoy, all portal information is available in Office task panes. Contact us today to learn how major law firms in 8 countries use Handshake Software to increase the ROI for Microsoft Office SharePoint Server 2007.
