- ⇒ Automatic Creation of Folders, Metadata in the Extranet

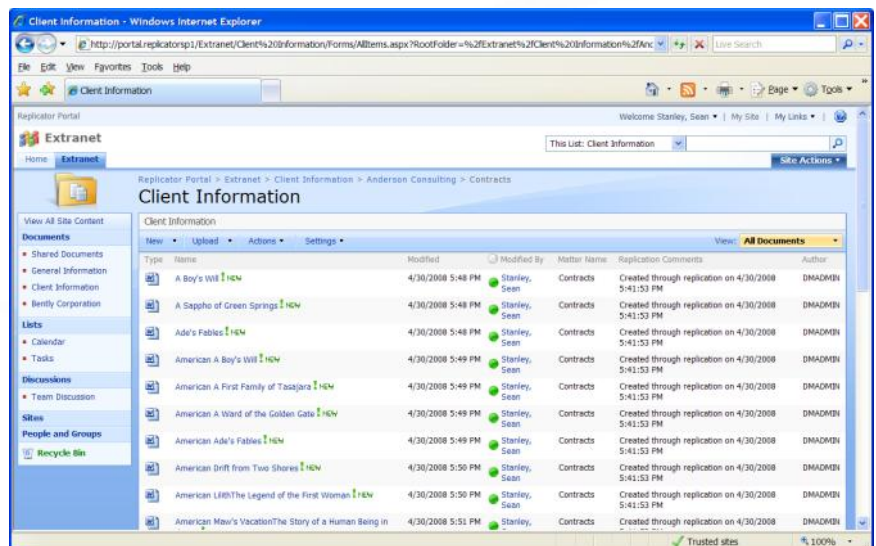

For Law Firms

- ⇒ Improved Client Value
- ⇒ Increase Client Retention
- ⇒ Offer New Services to Clients
- ⇒ Do not force Clients to learn Proprietary tool for Collaboration

Connect Clients to Content

To meet the needs of today's fast-paced, competitive business climate, Firms need to provide a higher level of service for their clients. Connecting clients directly to their work product fosters a deeper relationship demonstrating considerable value to clients. To be effective, the connection has to with technologies familiar to the broadest possible audience.

Handshake Software™ Content Replication connects clients to their work product by migrating content from Interwoven® and Open Text® (Hummingbird) Proprietary ECM systems to Microsoft® Office SharePoint® Server (MOSS) 2007 to create standards-based customer facing extranets. Content Replication creates standard extranets for clients without putting a technology burden on Law-Firm personnel.

Client Records Replicated to SharePoint

Flexibility is a critical requirement in Content Replication. Firms, Practices Areas, Lawyers and Clients can differ in how they want to communicate work products. To respond to this requirement, Content Replication has several means to define how content is migrated from the ECM system to the Extranet; from fully under user control, workflow-enabled to fully automated. Control is another requirement. Content Replication must be able to integrate into a Firms Extranet provisioning strategy, provide extensive audit trails and assure the firm that information is never erroneously passed to a client.

Content Replication

Leveraging Microsoft Office SharePoint Server (MOSS) 2007 for Customer Facing Extranets
